

TITLE

"Pharmaceutical compositions for treating pathologies brought about by an altered lipid metabolism"

5

SUMMARY

The co-ordinated use of an alkanoyl L-carnitine (e.g. propionyl L-carnitine) and a statine (e.g. simvastatin) is disclosed for treating pathologies brought about by an altered lipid metabolism, wherein by co-ordinated use both the substantially contemporaneous co-administration of the two active ingredients and the administration of a combination composition comprising a mixture of the two active ingredients, is meant.
